摘要: We refine the L^p restriction estimates for Laplace eigenfunctions on Riemannian surfaces, originally due to Burq, Gérard, and Tzvetkov. Our approach, based on variable-coefficient weighted Fourier extension estimates, unifies and sharpens earlier results of Eswarathasan and Pramanik. We also establish sharp estimates for eigenfunctions restricted to tubular neighborhoods of curves, providing new insights related to the Mizohata–Takeuchi conjecture.

报告人简介: 席亚昆, 浙江大学长聘副教授, 数学学院院长助理, 国家级青年人才, 长期研究调和分析及相关领域, 师从美国著名数学家Sogge教授, 在CMP,AJM,Math Z,JFA,PLMS,TAMS等国际权威学术期刊上发表文章二十余篇。
